Prof. Dr. B. Pareigis

## Problem set for Advanced Algebra

(45) (a) Let $A$ - Mod be equivalent to $B$ - Mod. Show that $\operatorname{Mod}-A$ and $\operatorname{Mod}-B$ are also equivalent.
(b) Let $\mathbb{K}$ be an integral domain (commutative without zerodivisors). Show that $\mathbb{K}-\operatorname{Mod} \simeq \operatorname{Mod}-\mathbb{K}$.
(46) Show that an equivalence of arbitrary categories preserves monomorphisms.
(47) Show that an equivalence of module categories preserves projective modules, but not free modules.
(48) Let $D$ be a division algebra. Show that $D-\operatorname{Mod} \simeq \operatorname{Mod}-D$ if and only if there is an isomorphism of algebras $D \cong D^{o p}$.
